

TAbic® H-120

DESCRIPTION:

A live, attenuated virus vaccine tablet for the primary immunisation of fowls against Infectious Bronchitis.

COMPOSITION:

Each effervescent tablet contains 1 000 or 5 000 doses of live, freeze-dried Infectious Bronchitis virus, H-120 strain, of chicken embryo origin. Minimum titre per dose is $10^{3.5}$ EID₅₀

DIRECTIONS FOR USE: Use only as directed.

TAbic® H-120 Vaccine is intended for the immunisation of fowls against Infectious Bronchitis.

TAbic® H-120 Vaccine may be administered via the drinking water, as an eye drop, or as an aerosol spray.

Consult a veterinarian on the best vaccination programme for your circumstances.

Reconstitution of the tablet vaccine: Press the blister to release the tablet into cool, clean, non-chlorinated water. Make sure that the tablet is fully dissolved while gas is being released. Wait 1 to 2 minutes until complete dissolution is achieved and then mix gently to ensure homogenous dispersion of the vaccine.

For more detailed instructions consult the package insert.

PRECAUTIONS:

See package insert.

WARNINGS:

See package insert.

STORAGE:

Store between 2 °C and 8 °C. Protect from light.

Do not freeze. Use within expiry date.

PRESENTATION:

10 tablets per blister pack. Each effervescent tablet contains 1 000 or 5 000 doses.
