

## TAbic® V.H.

### DESCRIPTION:

A live, attenuated virus vaccine tablet for the immunisation of fowls against Newcastle Disease (NCD) via the drinking water, eye drop or aerosol spray methods.

### COMPOSITION:

Each effervescent tablet contains live Newcastle Disease virus, V.H. strain, of fowl embryo origin. Minimum titre per dose:  $10^{6.0} \text{EID}_{50}$ .

### DIRECTIONS FOR USE: Use only as directed.

TAbic® V.H. vaccine is recommended for the primary vaccination of fowls. Secondary vaccination may be performed with an inactivated vaccine or with follow-up applications of TAbic® V.H.

TAbic® V.H. vaccine may be administered via the drinking water, as an eye drop or as an aerosol spray. It is recommended that, in Day old chicks, vaccination be conducted by either eye drop or coarse spray (> 100 microns) methods.

Repeat vaccinations can be either by the drinking water or spray methods.

Consult a veterinarian on the best vaccination programme for your circumstances.

### Reconstitution of the tablet vaccine:

Press the blister to release the tablet into cool, clean, non-chlorinated water. Make sure that the tablet is fully dissolved while gas is being released. Wait 1 to 2 minutes until complete dissolution is achieved and then mix gently to ensure homogenous dispersion of the vaccine.

### PRECAUTIONS:

See package insert.

### WARNINGS:

See package insert.

### STORAGE:

Store between 2 °C to 8 °C in a dark place. Protect from light. **Do not freeze.** Use within expiry date marked on the blister.

### PRESENTATION:

10 tablets per blister pack. Each effervescent tablet contains 1 000, or 5 000 doses.

### REGISTRATION NUMBER:

G3403 (Act 36/1947)
